IF POSSUMS ROAMED PROFESSORS WALK

Isabella Handbury
FoDR, 2024, Sem 2

UNDERSTAND

FREE SPACE ON THE SIDE OF AND ON TOP OF BUILDINGS.SHOULD BE CONSIDERED FOR VEGETATION.

EXTENSIVE CANOPY COVERAGE PROVIDING SHADE AND A PROTECTIVE LAYER FOR THE SMALL ANIMALS THAT INHABIT THE SITE.

SMALL ‘GREEN WALL’ LIKE VEGETATION. GOES FURTHER THAN ALL VEGETATION EXISTING ON A SINGLE PLANE.

WHILE THERE IS MUCH VEGETATION AS DEPICTED WITH THE LONDON PLANES THAT LINE THE WALK, THERE IS STILL SO MUCH FREE SPACE TO BE UTELISED TO INTEGRATE IN PLANT LIFE. REWILDING AND ATTRACTIVE SPECIES TO THE SITE.

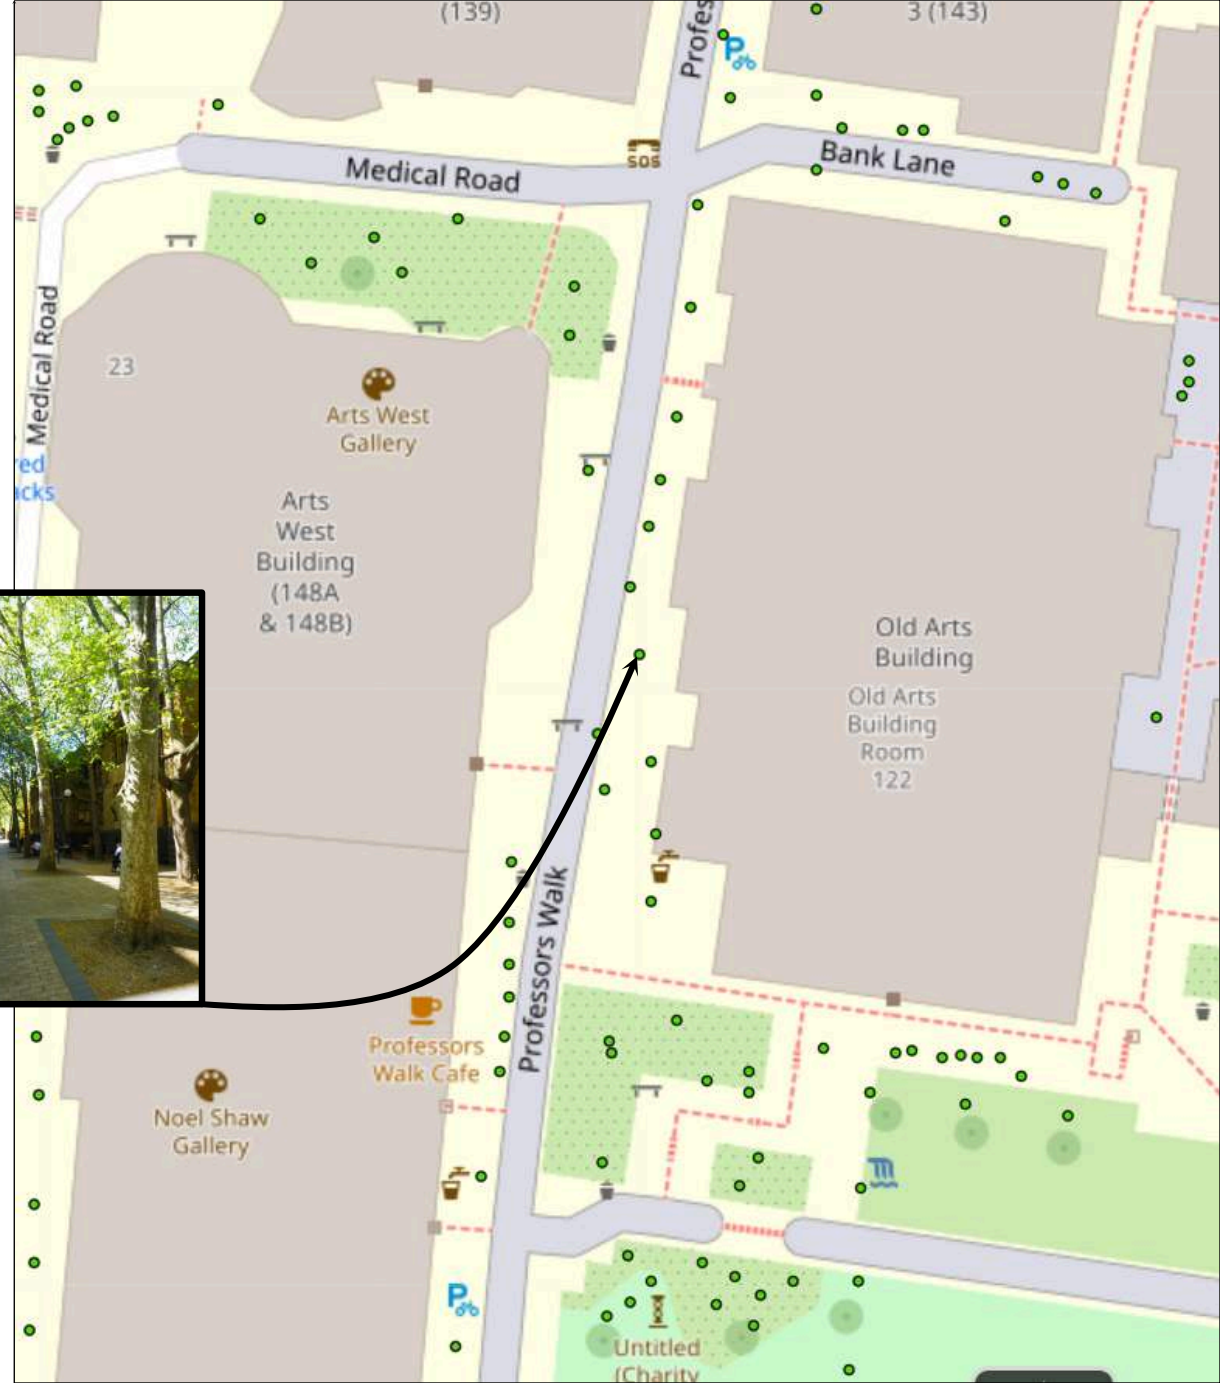

WHEN CONSIDERING REWILDING, IT IS STILL IMPORTANT TO NOTE THAT COHABITATION NEEDS TO BE ACHIEVED BETWEEN HUMANS AND OTHER LIVING BEINGS. THE SITE NEEDS TO STILL REMAIN FUNCTIONAL FOR EVERYDAY LIFE.

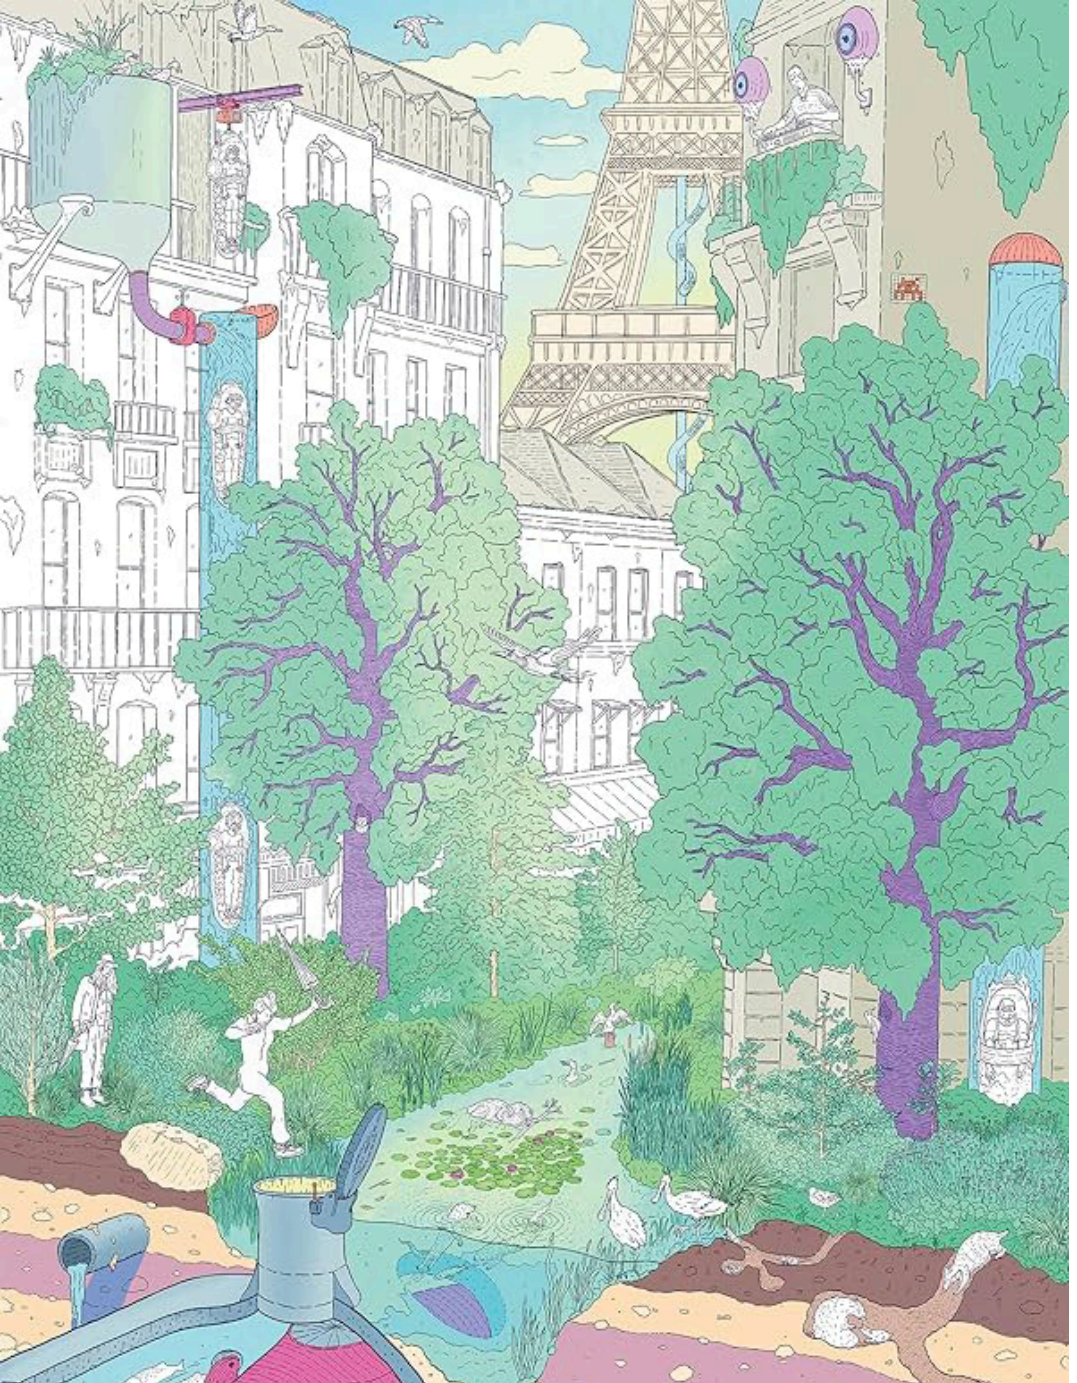

EXISTING VEGITATION

ALONG PROFESSORS WALK THERE ARE MANY NATURAL INHABITANTS. THIS IS INCLUSIVE OF THE WIDE INTERNATIONAL VARIETIES SEEN IN THE SYSTEMS GARDEN, THE INTRODUCED SPECIES OF VEGETATION PLANTED ALONG THE WALK AND THE MANY ANIMALS ROAMING THE SITE (HIGHLIGHTED IN THE FOOD WEB).

SOME KEY PLANTS THAT ARE MARKED IN THE UNIVERSITY'S URBAN FOREST INTERACTIVE MAP ARE THE LONDON PLANE (DEPICTED ON THE RIGHT), SILVER BIRCH, ENGLISH ELM, VICTORIA BLUE GUM, FISHBONE WATER FERN AND MANY MORE. WHILE THERE IS A RICH VARIETY OF PLANT AND ANIMAL LIFE THERE ARE STILL LARGE AREAS FOR IMPROVEMENT. MUCH OF PROFESSORS WALK IS LINED WITH TREES, BUILDINGS PARTIALLY COVERED IN VINES AND SMALL GARDEN BEDS ARE LOCATED ON EITHER SIDE OF THE WALK. HOWEVER, TO ACHIEVE IMPACTFUL REWILDING A FULL COMMITMENT IS REQUIRED. THIS CAN LOOK LIKE FULL GREEN WALLS LINING BUILDINGS OR INTEGRATED GARDEN BEDS EMERGING ONTO THE WALK. THE KEY FOR SUCCESSFUL REWILDING IS TO BE BOLD, TAKING INSPIRATION FROM THE SITES LONG AGO NATURAL STATE AND INTEGATING IT INTO THE SITE TO BE ENJOYED BY FUTURE GENERATIONS.

URBAN REWILDING

A PREMIUM EXAMPLE OF THE DESIGN CONCEPTUALISATION OF URBAN REWILDING THAT PUSHES THE CONFINES OF WHAT IS POSSIBLE IN ORDER TO ACHEIVE TRUE CREATIVE DESIGN IS STEVE MUSHIN'S BOOK ULTRAWILD. IN DISCUSSIONS OVER HIS BOOK HE COMMENTS " REWILDING MEANS HELPING LANDSCAPES RETURN TO WILDERNESS, THEN STEPPING BACK AND LEAVING NATURE ALONE TO THRIVE AND TAKE CARE OF ITSELF,". THIS EPITOMISES THE CONCEPTS BEING EXPLORED IN THIS ASSIGNMENT. WHERE IN ORDER TO REWILD NATURAL AGENTS OUR INITIAL ASSISTANCE IS REQUIRED. HOWEVER, IN THE LONG TERM THEY NEED TO BE GIVEN THE SPACE TO INTEGRATE AND THRIVE ON THEIR OWN.

WHILE MUSHIN'S DESIGNS ARE EXTREME, THEIR OUTLANDISH NATURE ALLOWS US TO EXPLORE THE BOUNDS OF WHAT IS POSSIBLE. SUPPORTED BY MUSHIN'S CLAIM THAT REWILDING ' IS ALREADY HAPPENING'.

BEE BUS-STOPS

AN EXAMPLE OF URBAN REWILDING THAT IS CURRENTLY ON THE RISE IS BEE BUS-STOPS. THIS IS AN EXAMPLE THAT MUSHIN HIGHLIGHTED IN HIS DISCUSSIONS ON URBAN REWILDING COMMENTING ON HOW THIS IS PROOF OF HUMANS COMING TO TERMS WITH THE NEED TO REWILD. WHILE THIS CONCEPT INITIALLY MADE AN APPEARANCE IN THE DUTCH CITY OF UTRECHT, THEY ARE BEGINNING TO POP UP IN CITIES ACROSS EUROPE, CANADA AND EVEN HERE IN AUSTRALIA.

THESE BUS STOP ROOFS ARE FULL OF LOCAL FLORA AIMING TO ATTRACT POLLINATORS. WITH INTERNATIONAL DECREASES IN POLLINATING INSECTS THIS DESIGN IS ALREADY PROVING BENEFICIAL FOR REWILDING AS IN RECENT YEARS IT HAS STABILISED THE DUTCH BEE POPULATION.

THIS REAL WORLD IMPLEMENTED DESIGN FROM REWILDING IS STEADILY MAKING BENEFICIAL IMPACTS, FURTHER PROMPTING DESIGNERS FROM AROUND THE WORLD TO MERGE INTO A REWILDING DESIGN MINDSET.

GREEN WALLS

THIS EXAMPLE OF DESIGNING AND IMPLEMENTING WITH THE AIM OF REWILDING DEMONSTRATES THAT NOT ALL OUTLANDISH CONCEPTS, LIKE THOSE OF STEVE MUSHIN, ARE DEVELOPABLE. THIS LIVING WALL WAS IMPLEMENTED IN MADRID WITH THE INTENTION TO GROW BIODIVERSE URBAN FEATURES. HOWEVER, THE DESIGN HAS RUN INTO SOME ISSUES WITH IRRIGATION AND THE SELECTION OF THE PLANT SPECIES PROMPTING HIGH AMOUNTS OF MAINTENANCE AND COMPLEXITIES.

WHILE THE CONCEPT OF REWILDING AND THE DESIGN STYLE OF MUSHIN ARE COMMENDABLE AND WHERE DESIGNERS SHOULD AIM TO THINK AND DESIGN FOR, THERE ARE CHALLENGES THAT STILL STAND IN THE WAY. THIS INCLUDES DEVELOPABILITY, IMPACTS OF PRE-EXISTING SPECIES AND MAINTAINING LIVING ASPECT OF A DESIGN.

THIS SHOULD NOT DISCOURAGE DESIGNERS FROM THE PATH OF REWILDING, HOWEVER IT GIVES ATTENTION TO ASPECTS OF THE DESIGN PROCESS FOR URBAN REWILDING THAT SHOULD BE HIGHLY CONSIDERED.

KEY NEW INHABITANCE

FOLLOWING SOME CURATED REWILDING OF PROFESSORS WALK WE WOULD SEE A RETURN OF ANIMALS THAT PREVIOUSLY IN HABITED THE SPACE, SUCH AS KOALAS, AS WELL AS GROWTH OF SPECIES THAT ALREADY INHABIT THE SPACE. NOTABLY MY CHOSEN AGENT THE BRUSHTAIL POSSUM. BRUSHTAIL POSSUMS ARE INHABITANTS OF URBAN AREAS HOWEVER THEY ARE CONSISTENTLY DISPLACED FROM THEIR HABITAT AND PUT IN DANGER OF THEIR NATURAL PREDATORS AS WELL AS HUMAN INFLUENCED DANGERS.

REWILDING WOULD INCLUDE MANUALLY REINTRODUCING PLANT SPECIES TO FEED THE NEW OMNIVOROUS AND HERBIVOROUS SPECIES AS WELL AS GENERATING A STABLE FOOD CHAIN FOR CARNIVORES. SOME PLANT SPECIES THAT I WOULD INTRODUCE TO AID IN REWILDING ARE DISPLAYED ON THE LEFT ALONG WITH THE PREDICTED SPECIES THAT WOULD RETURN TO PROFESSORS WALK.

MANY OF THE SPECIES CAN ALREADY BE FOUND ON CAMPUS AND WITHIN URBAN MELBOURNE, HOWEVER THROUGH REWILDING THEIR POPULATION WOULD GROW AND THEY WOULD THRIVE.

FEATURES TO SUPPORT

Peregrine Falcon

Brushtail Possum

IN ORDER TO ACHIEVE IMPACTFUL REWILDING WE NEED TO STABILISE A FOOD WEB, WORKING FROM THE GROUND UP IN TERMS OF A FOOD CHAIN. WE WOULD START WITH ORGANIC MATTER AND PLANTS IN ORDER TO FEED THE OMNIVORES AND HERBIVORES. TO THRIVE IN AN URBAN REWILDING DESIGN THESE PLANTS AND ORGANIC MATTER WOULD REQUIRE ADEQUATE SUNLIGHT, WATER, NUTRIENTS AND SOME WOULD BENEFIT FROM CONTINUAL MAINTENANCE FROM HUMANS. THE NEXT LAYER OF OUR FOOD CHAIN REQUIRES A BALANCE. IN PARTICULAR THE INSECTS AND SMALL ANIMALS, THESE SPECIES WOULD REQUIRE FOOD FROM THE PLANTS AND ORGANIC MATTER JUST MENTIONED ALONG WITH SHELTER FROM THEIR PREDATORS. THIS IS WHERE THE FINE BALANCE COMES INTO PLAY.

WE WANT A STABLE FOOD CHAIN TO ACHIEVE IMPACTFUL AND CONTINUAL REWILDING THIS REQUIRES A LEVEL PLAYING FIELD FOR PREDATORS AND PREY. WE WANT TO AIM TO PROTECT POPULATIONS OF SMALLER ANIMALS FOR EXAMPLE BY PROVIDING SHELTERS FROM THEIR PREDATORS OF LARGE BIRDS. HOWEVER WE CANNOT FULLY PROTECT THESE ANIMALS OR WE RISK DAMAGING THE POPULATION OF PREDATORS, DESTABILISING THE FOOD CHAIN.

THEREFORE A LIST OF KEY FEATURE FOR SUPPORT CANNOT INCLUDE ELEMENTS THAT PUT PREDATORIAL SPECIES AT RISK. HOWEVER THEY CAN INCLUDE;

- LOCATIONS FOR THE GROWTH OF PLANT SPECIES, WITH ADEQUATE SUNLIGHT, WATER, NUTRIENTS.

- CONTINUAL SUPPLY OF ORGANIC MATTER.

- SHELTER FOR SMALLER ANIMALS FROM THEIR PREDATORS.

- AS LITTLE HUMAN INVOLVEMENT AND MAINTENANCE OF FEATURES AS POSSIBLE

7 METRICS FOR BIODIVERSITY MELBOURNE UNI

Metric 1

THE FIRST METRIC FOCUSES ON AREAS AROUND CAMPUS THAT HAVE ROOM FOR VEGETATION. THIS IS INCLUSIVE OF LAWNS, GARDEN BEDS, PONDS AND GREEN ROOFS.

Metric 2

THIS METRIC IS HIGHLIGHTING THE SPACES ON CAMPUS THAT HAVE THE REQUIRED RESOURCES TO ACHIEVE BIODIVERSITY. THIS INCLUDES FOOD SOURCES, ECOSYSTEM UNITS AND TREE HOLLOWS.

Metric 3

THE THIRD METRIC FOCUSES ON UNDERSTOREY PLANT SPECIES. THESE ARE PLANTS THAT THRIVE BELOW FOREST CANOPY. SOME EXAMPLES INCLUDE SHRUBS AND SMALLER TREES.

Metric 4 and Metric 5

THESE TWO METRICS ARE CONCERNING THE NUMBER OF TREES AND THEIR SPECIES. FOR THIS BIODIVERSITY PROJECT THE UNIVERSITY HAS COLLECTED DATA ON THE TREES CURRENTLY ON CAMPUS. THIS METRIC ACKNOWLEDGES THE VITALITY OF TRESS IN URBAN SPACES FOR THE HEALTH OF THE CITIES, WITH THEM PROVIDING HABITATS. IMPROVING AIR QUALITY AND STORING CARBON FROM OUR ATMOSPHERE.

Metric 6

METRIC 6 LOOKS TO TREE CANOPY COVER AREA ENCOURAGING GROWTH FOR ON-CAMPUS TREE COVER. AIMING TO GENERATE AND MAINTAIN SHADY GREEN SPACES. THIS IS NOT JUST FOR BIODIVERSITY BUT ALSO FOR HUMAN USES.

Metric 7

THIS METRIC IS CENTRED AROUND MAINTAINING BASELINE LEVELS FOR FAUNA AND FUNGI SPECIES. ENDEAVOURING TO PROTECT WILDLIFE DURING ANY CONSTRUCTION ON-CAMPUS.

REWILDING CALCLATIONS

USING THE DATA FROM THE UNIVERSITY OF MELBOURNE'S BASELINE DATA PROJECT WE CAN ESTIMATE THAT THE PARKVILLE CAMPUS HAS 6,668 SQUARE METERS OF NET CANOPY COVERAGE. USING AN ESTIMATE FOR THE LENGTH OF PROFESSORS WALK OF 250 METERS AND THE AIM TO INCREASE VEGETATION ALONG BOTH SIDES OF THE WALKWAY. WE CAN APPROXIMATE AN INCREASE OF 500 SQUARE METERS OF NEW VEGETATION.

EMPLOYING THE USE OF DATA FROM THE NATIONAL INSTITUTE OF HEALTH, WE CAN CONCLUDE THAT PER SQUARE METER OF VEGETATION THERE WILL BE 1 KG OF BIOMASS PROVIDED. THIS EQUATES TO 500 KG OF BIOMASS. FOCUSING ON THE FOOD CHAIN FROM THE GROUND UP, PER KG OF BIOMASS WE CAN APPROXIMATE 100 INSECTS. PREDATORS OF INSECTS CONSUME ROUGHLY 105 INSECTS A DAY.

POSSUM HOTEL

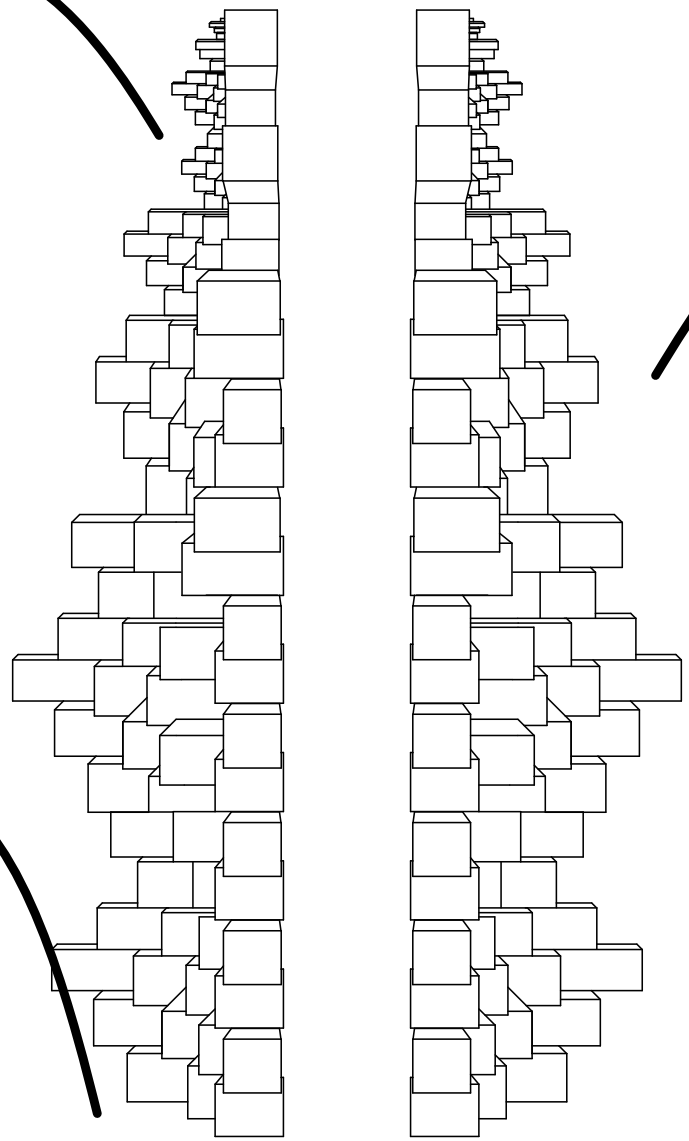

- POSSUM HOTEL
- OFFERS PROTECTION FROM PREDATORS
- MANY ROOMS TO AVOID THE POSSUM POPULATION BEING LIMITED BY ROOM AVAILABILITY

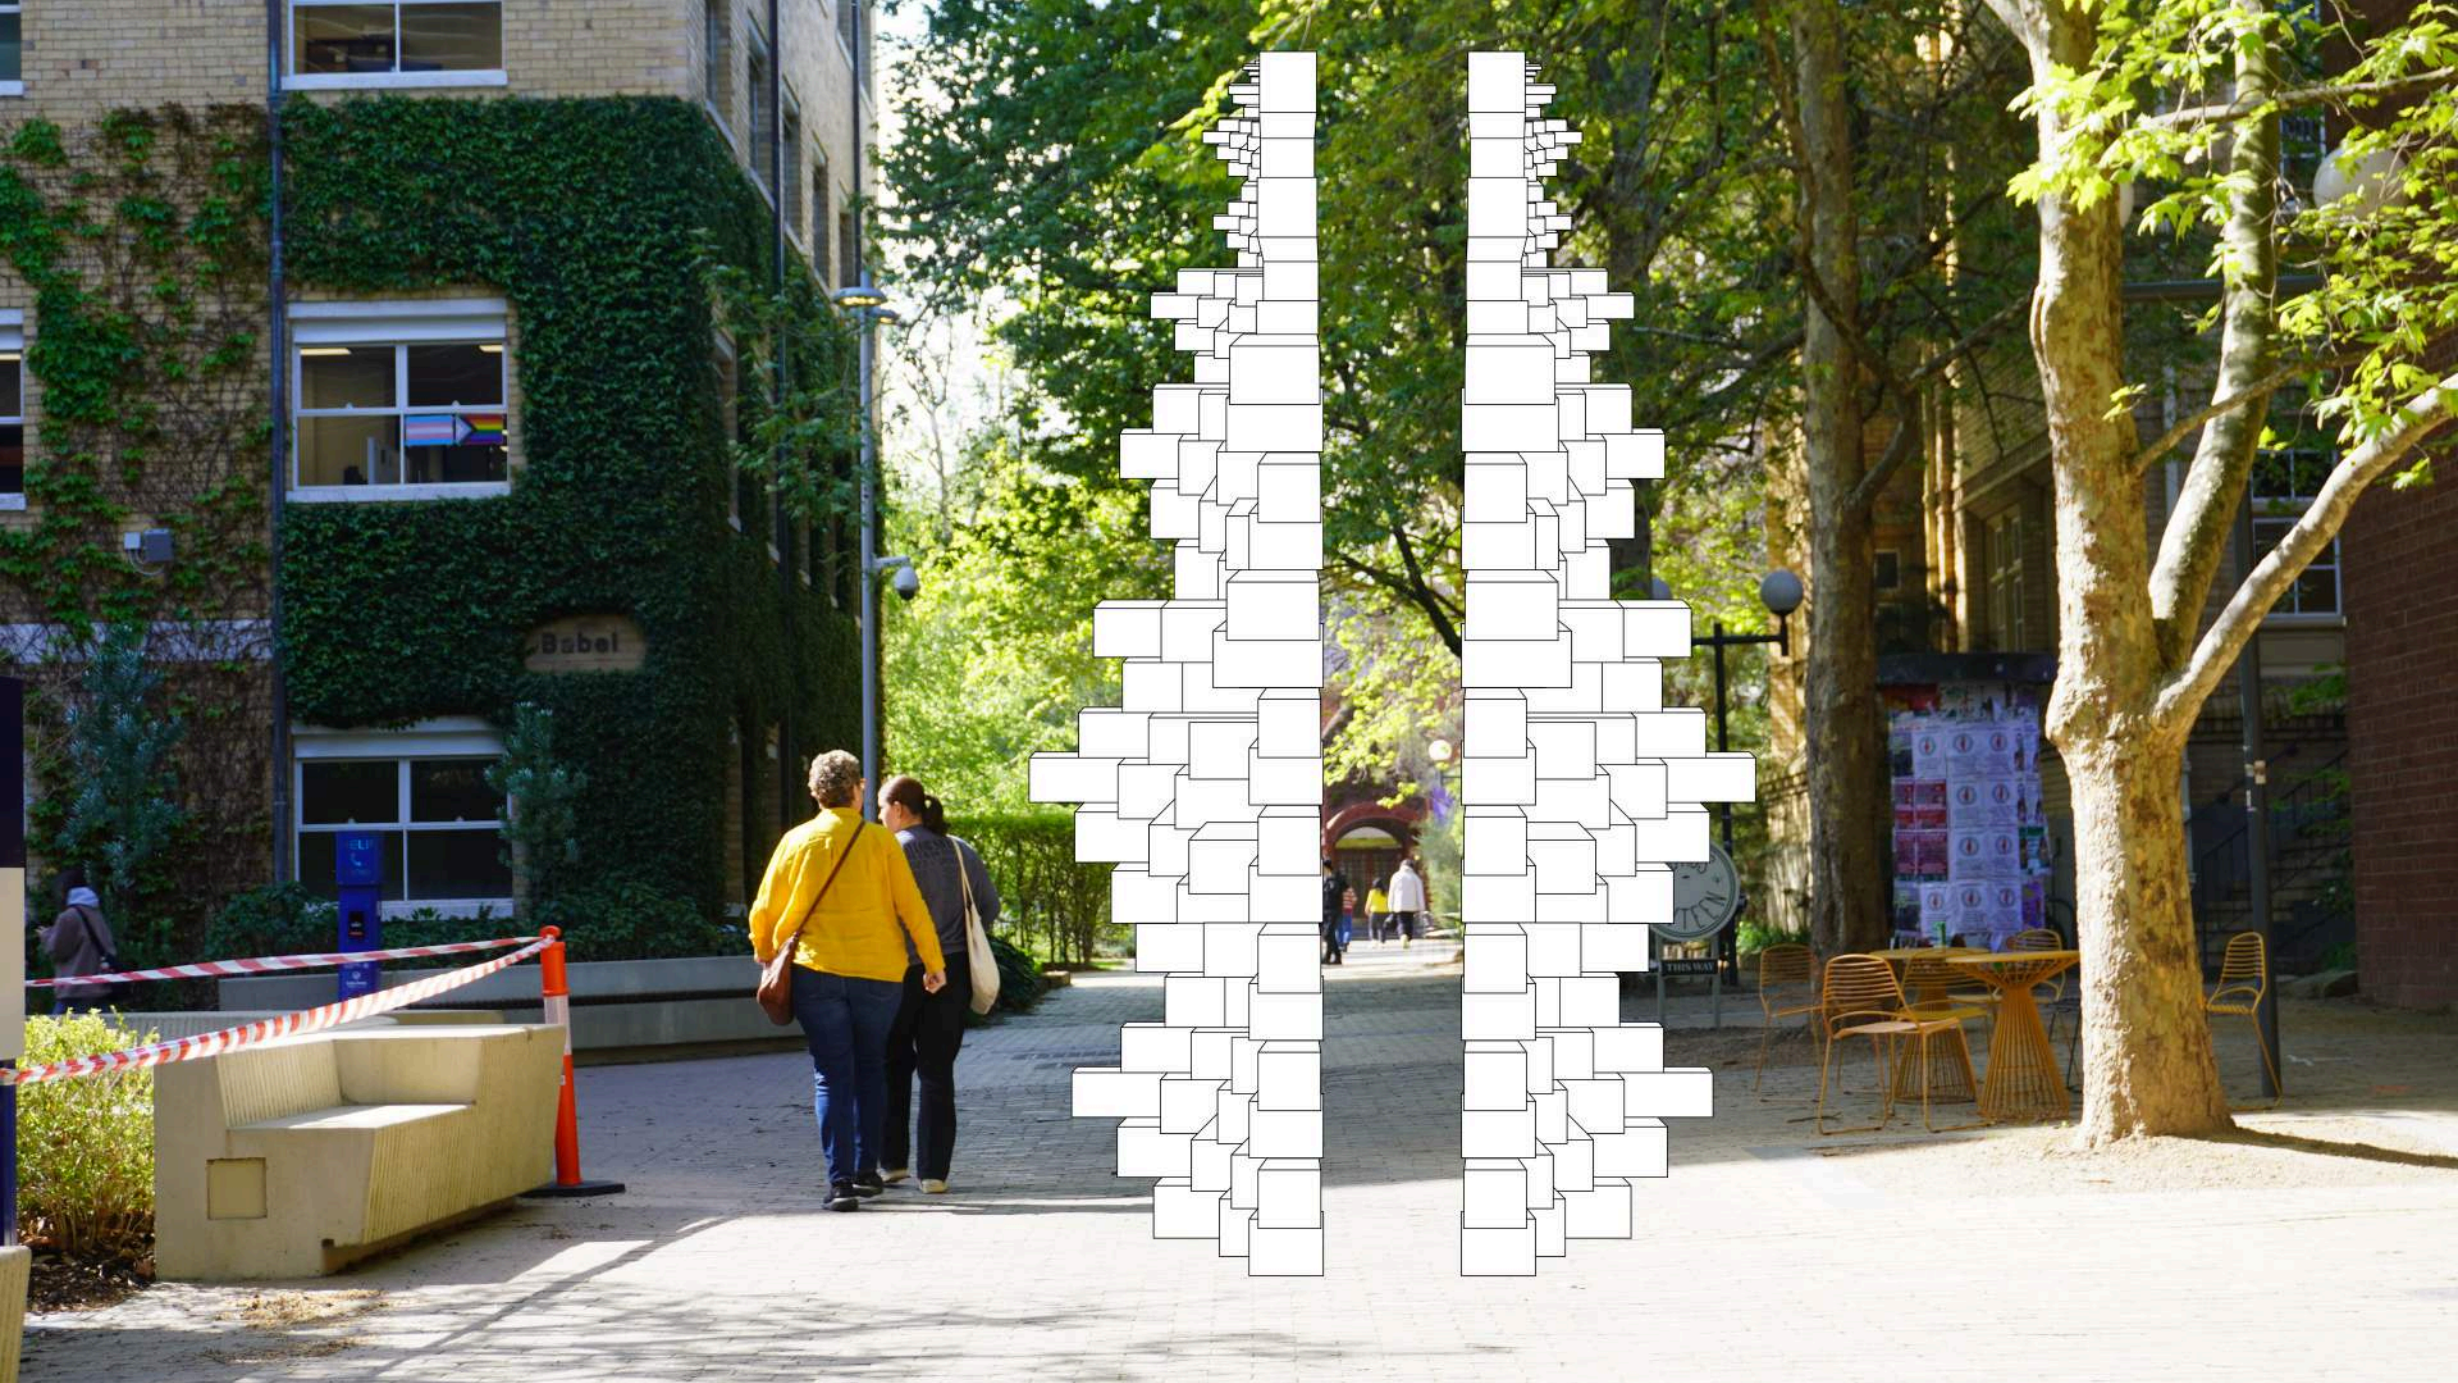

AN ISSUE WITH THIS DESIGN IS THAT IS DOES NOT PROTECT POSSUMS FROM PREDATORS WHEN THEY ARE SHELTERING OR ALLOWS THEM TO SAFELY TRAVERSE THE OPEN SPACE

CURVATURE INSPIRED BY THE CURVED BRANCHES OF GUM TREES

MODULA SYSTEM NOT CONNECTING TO ANY BUILDING, IS NOT DHERING TO SUPPORTING POSSUM'S NATURAL BEHAVIOR AND MOVEMENT PATTERNS TO EVADE PREDATORS

MODULA SYSTEM'S LOCATION IN CENTRE OF PATHWAY PROMOTES INTERACTION AND IMMERSION WITH HUMANS

Babel

PRACTISE

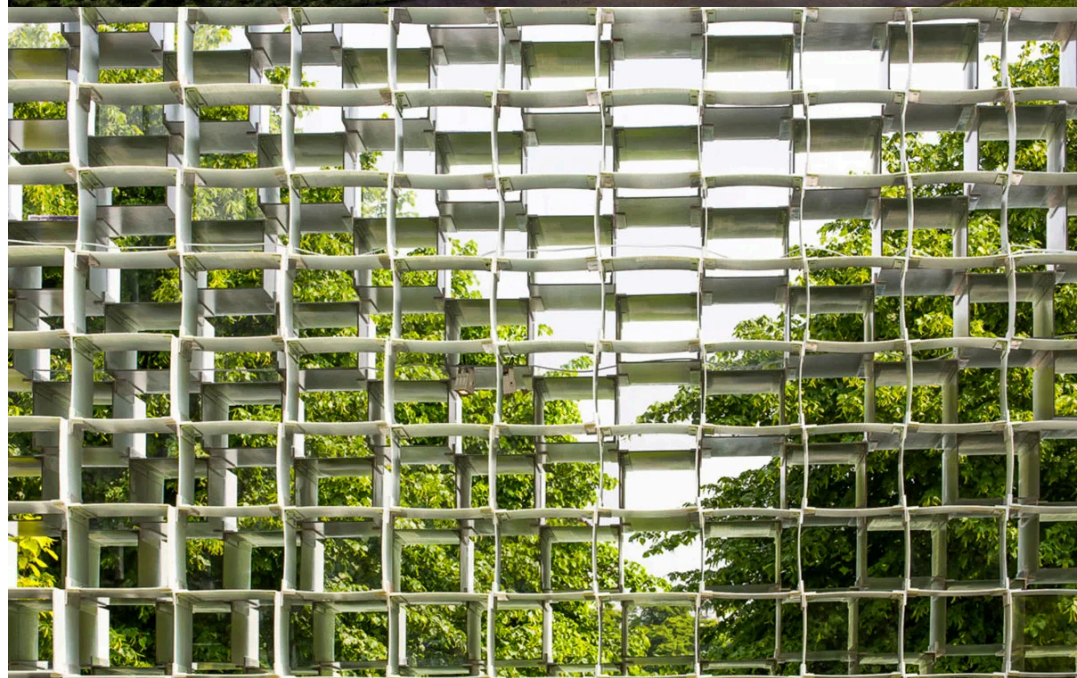

THE BIG PAVILION

THE BIG PAVILION CREATED BY THE BJARKE INGELS GROUP IN 2016 FOR DISPLAY AT THE SERPENTINE GALLERY PAVILION SPACE, IS A KEY EXAMPLE OF BOTH DESIGNING SPACE FOR CONGREGATION AS WELL AS UTILISING JUXTAPOSING DESIGN PRINCIPLES. INGELS DESCRIBED THE PAVILION AS " A STRUCTURE THAT EMBODIES MULTIPLE ASPECTS THAT ARE OFTEN PERCEIVED AS OPPOSITES, " HIGHLIGHTING THE SPECIFICS OF " FREEFORM YET RIGOROUS; MODULAR YET SCULPTURAL; BOTH TRANSPARENT AND OPAQUE; BOTH SOLID BOX AND BLOB," THROUGH THIS COMBINATION OF OPPOSING ASPECTS BIG CREATED A SPACE THAT CAN BE INTEGRATED INTO ANY LOCATION, TO ACT AS A SPACE FOR CONGREGATION.

WHEN THE SPACE WAS ON DISPLAY IT HAS BEEN USED TO HOUSE A COFFEE SHOP, AND BEEN A PERFORMANCE SPACE HOSTING DANCERS, MUSICIANS AND FILMMAKERS. THE PAVILION ENCOURAGES PEOPLE TO SHARE A SPACE, TO CONGREGATE AND INTERACT.

THIS MAKES THE CONCEPT AND DESIGN OF THE PAVILION KEY IN TRANSITIONING IT TO BE VIABLE FOR THE REWILDING PROJECT.

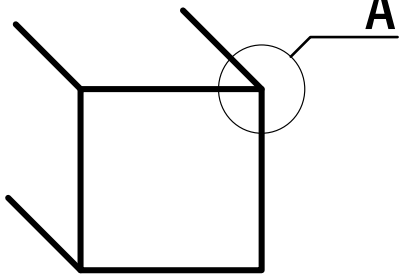

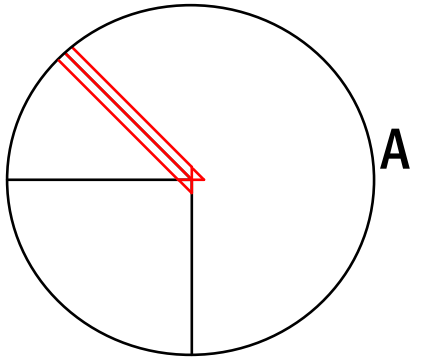

BIG PAVILION CONSTRUCTION

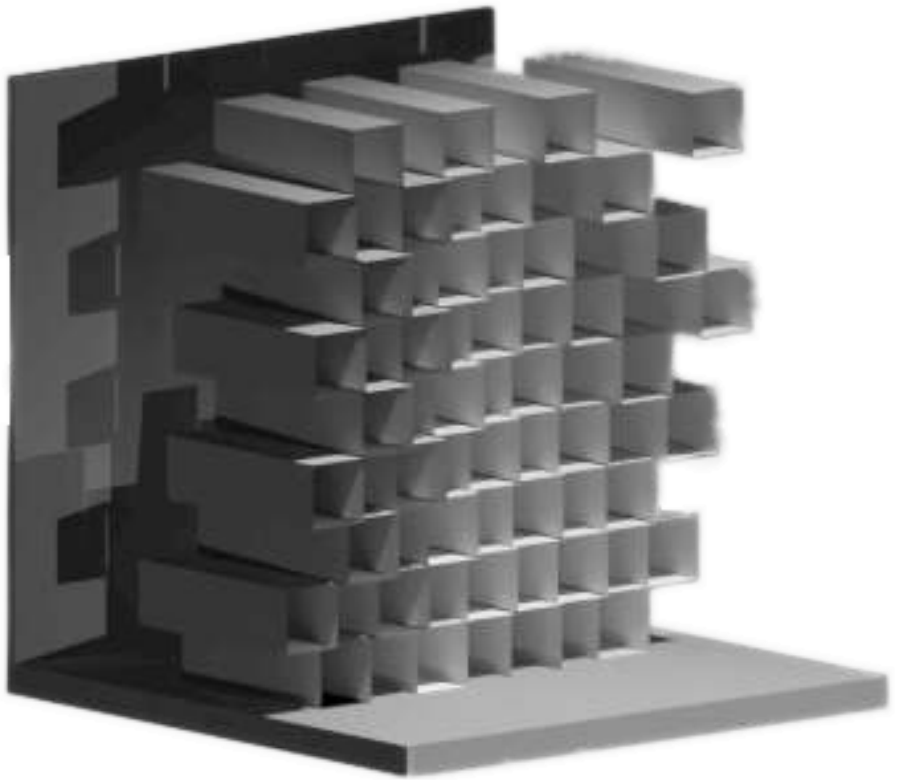

THE BIG PAVILION IS MADE UP OF INTERCONNECTING FIBREGLASS BLOCKS SUPPORTED WITH BRACKETS THAT ARE FIT TO THE INDIVIDUAL SIZE OF EACH BLOCK. THIS CUSTOMISATION OF THE SUPPORTS NOT ONLY IS MORE VISUALLY APPEALING BUT ALSO SAVES MATERIALS ALONG WITH NOT CREATING EXTRA LOAD THAT WOULD REQUIRE MORE STRUCTURAL SUPPORTS. THE PAVILION IS FREE STANDING AND HAS A VERY RIGID SUPPORT STRUCTURE.

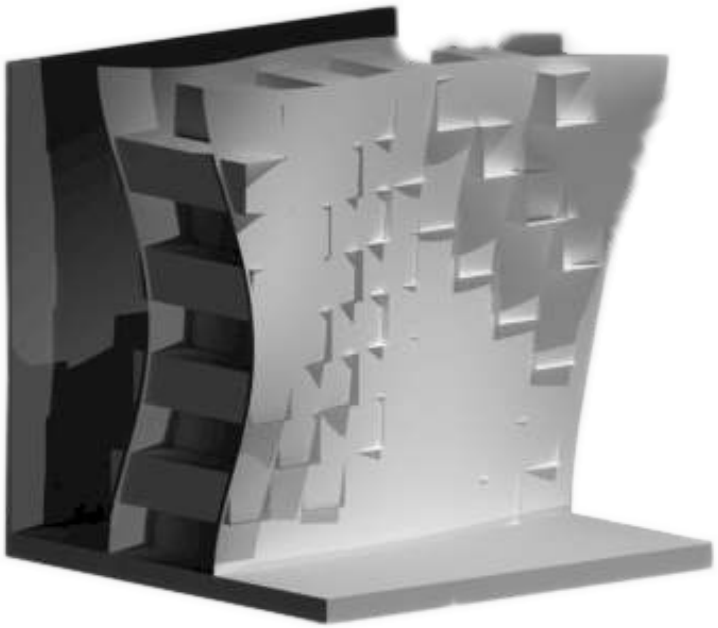

DUE TO HOW VITAL THE SUPPORTS ARE TO THE BIG PAVILION IT IS CRUTIAL TO INCLUDE THEM IN THE REWILDING MODULAR STRUCTURES. THIS ASPECT PROVIDES A LARGER DEPTH OF THROUGHT INTO DEVELOPABILITY. WHILE THE REWILDING MODELS WILL BE AMBITIOUS IT IS STILL KEY TO REVIEW DEVELOPABILITY.

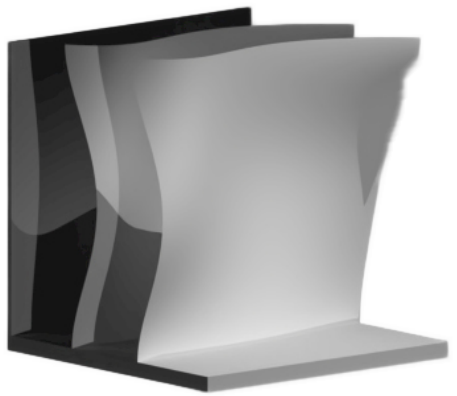

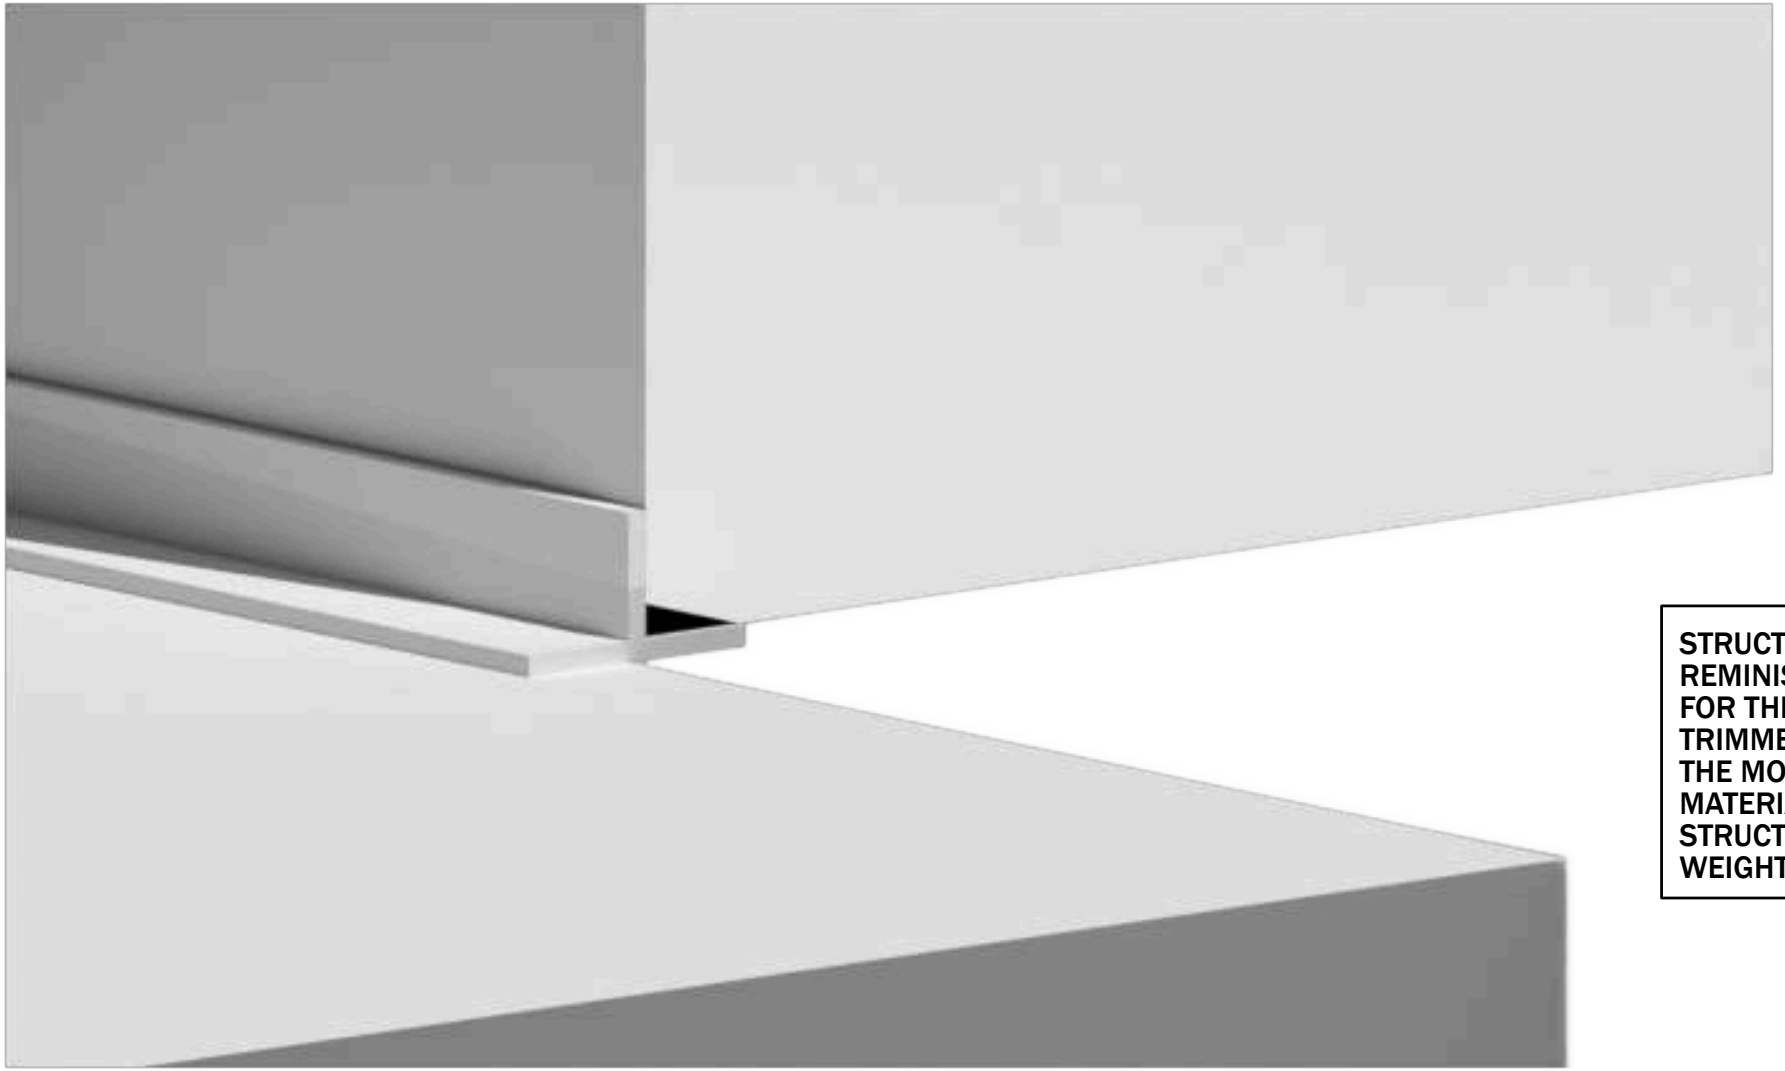

BIG PAVILLION RECREATION

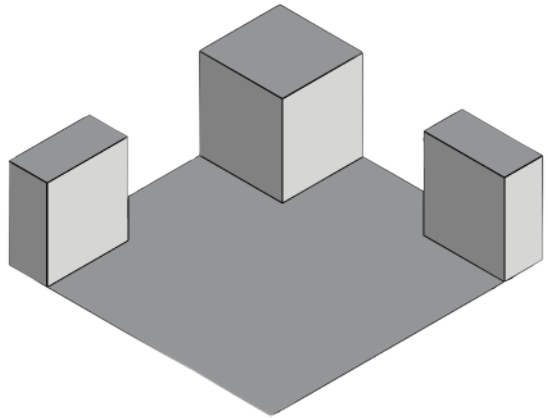

DARKNESS AND SHADOW IN THE RENDERS AIMING TO VISUALISE THE STRUCTURE THROUGH THE POSSUM'S NOCTURNAL LENS. PLAYING WITH THE SHADOWS FROM LIGHTS ON CAMPUS

STRUCTURAL SUPPORT REMINISCENT OF THAT USED FOR THE BIG PAVILION, TRIMMED TO THE EXACT SIZE OF THE MODULAR SQUARES. STEEL MATERIAL TO SUPPORT THE STRUCTURE'S WEIGHT AND THE WEIGHT OF THE POSSUMS

SELECTED MINI SITE

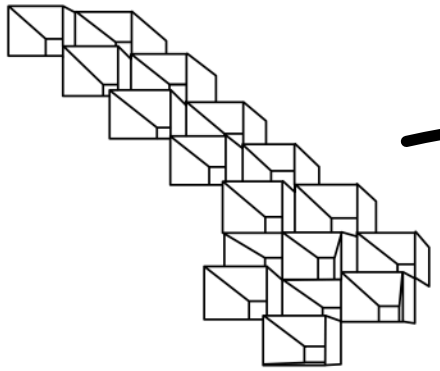

THE AREA OF PROFESSORS WALK THAT I HAVE CHOSEN AS MY MINI SITE IS THE JUNCTION BETWEEN THE BABEL, BIOSCIENCE AND OLD ARTS BUILDINGS. THIS SITE WAS CHOSEN SPECIFICALLY IN ORDER TO HAVE THE MOST POSITIVE IMPACT ON MY AGENT OF BRUSHTAIL POSSUMS. THIS AREA IS CURRENTLY LINED WITH TREES WHICH ARE POSSUMS' MAIN ROUTE OF TRANSPORTATION AND PROTECTION. HOWEVER, THERE IS A LARGE OPEN SPACE WHICH IS VOID OF ANY COVER WHICH WOULD BE AN AREA OF INCREASED RISK TO POSSUMS FROM FLYING PREDATORS. THIS OPEN SPACE ALSO MAKES POSSUMS VULNERABLE TO GROUND PREDATORS WHEN THEN NEED TO CROSS THE OPEN SPACE.

THE LOCATION OF THIS SPACE IS VERY SPECIFIC TO POSSUM'S PATTERNS OF MOVEMENT AS WELL. THE SITE'S PROXIMITY TO BOTH THE SYSTEMS GARDEN AND SOUTH LAWN HAVE IT ACT AS A BRIDGING LOCATION THAT POSSUMS MUST TRAVERSE IN ORDER TO REACH FOOD SOURCES AND LOCATIONS FOR OPTIMAL HABITATS. BECAUSE OF THIS, IN ORDER TO OPTIMISE THE REWILDING OF PROFESSORS WALK AND REINTRODUCING BRUSHTAIL POSSUMS, STRUCTURES MUST BE PUT IN PLACE TO PROTECT POSSUMS FROM PREDATORS AND ACT AS A 'PITSTOP' BETWEEN ALREADY ESTABLISHED LOCATIONS FOR THEM TO FIND FOOD AND SHELTER.

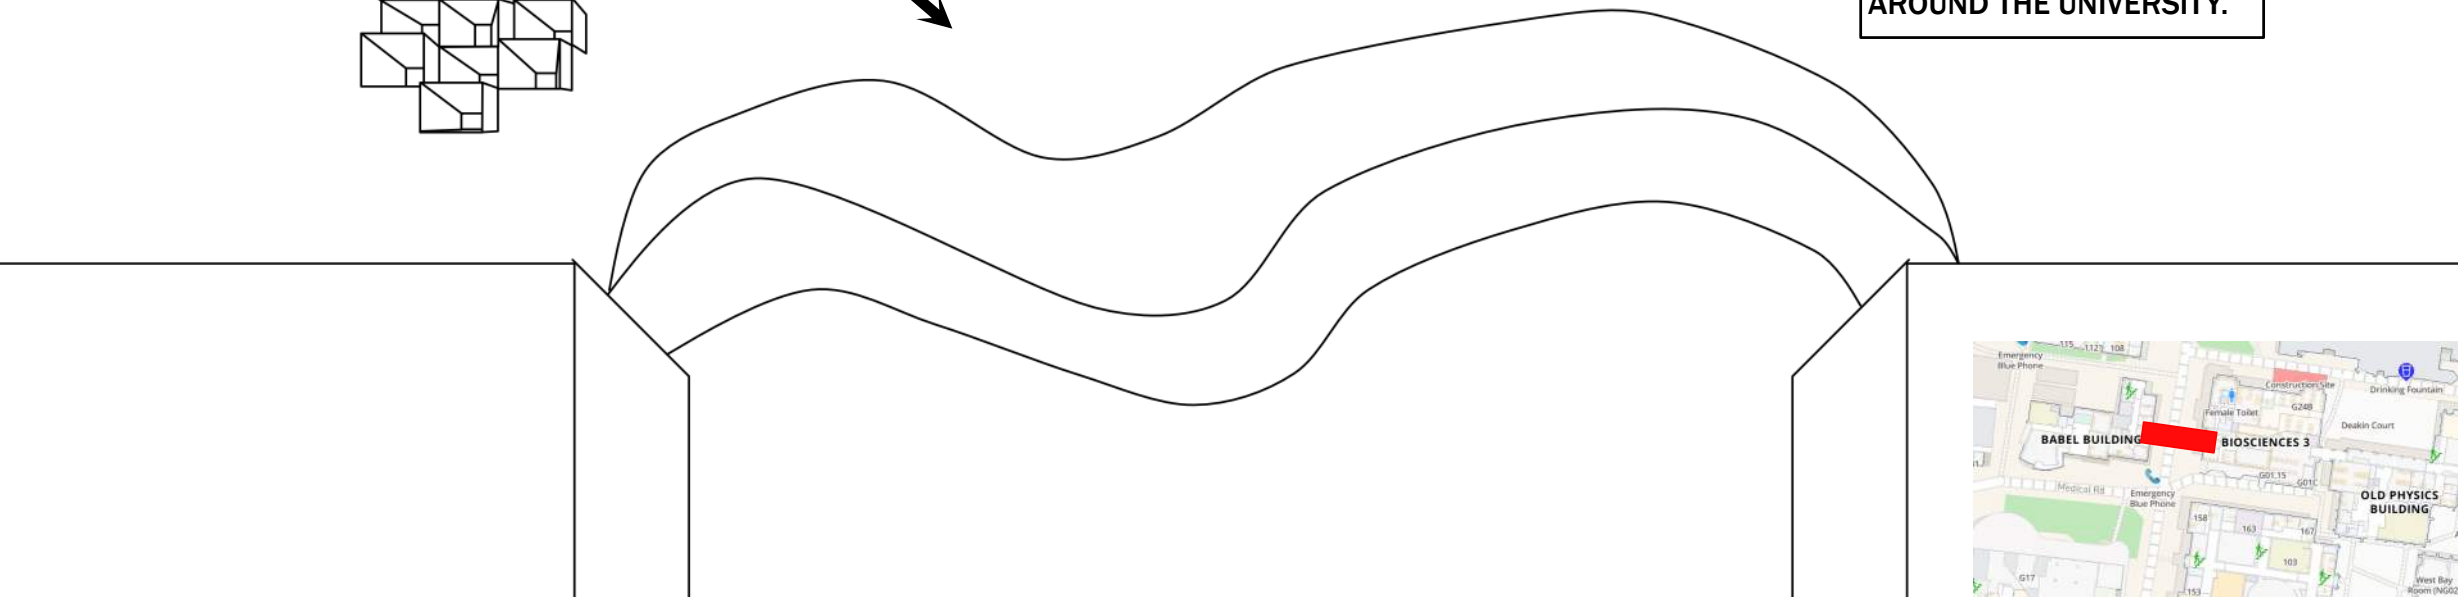

FURTHER DESIGN

FOLLOWING FURTHER ANALYSING OF THE MINI SITE AND REVIEWING THE NEEDS OF THE POSSUMS IN ORDER TO ACHIEVE REWILDING AND A GROWTH IN THE POSSUM POPULATION, I HAVE EXPLORED USING THE MODULAR STRUCTURE AS A BRIDGE TO PROTECT POSSUMS NOT ONLY FROM FLYING PREDATORS, WITH THE MODULA BOXES PROVIDING SHELTER, BUT ALSO PROVIDE ACCESSIBLE TRANSPORT ACROSS BUILDINGS TO PROTECT FROM GROUND PREDATORS.

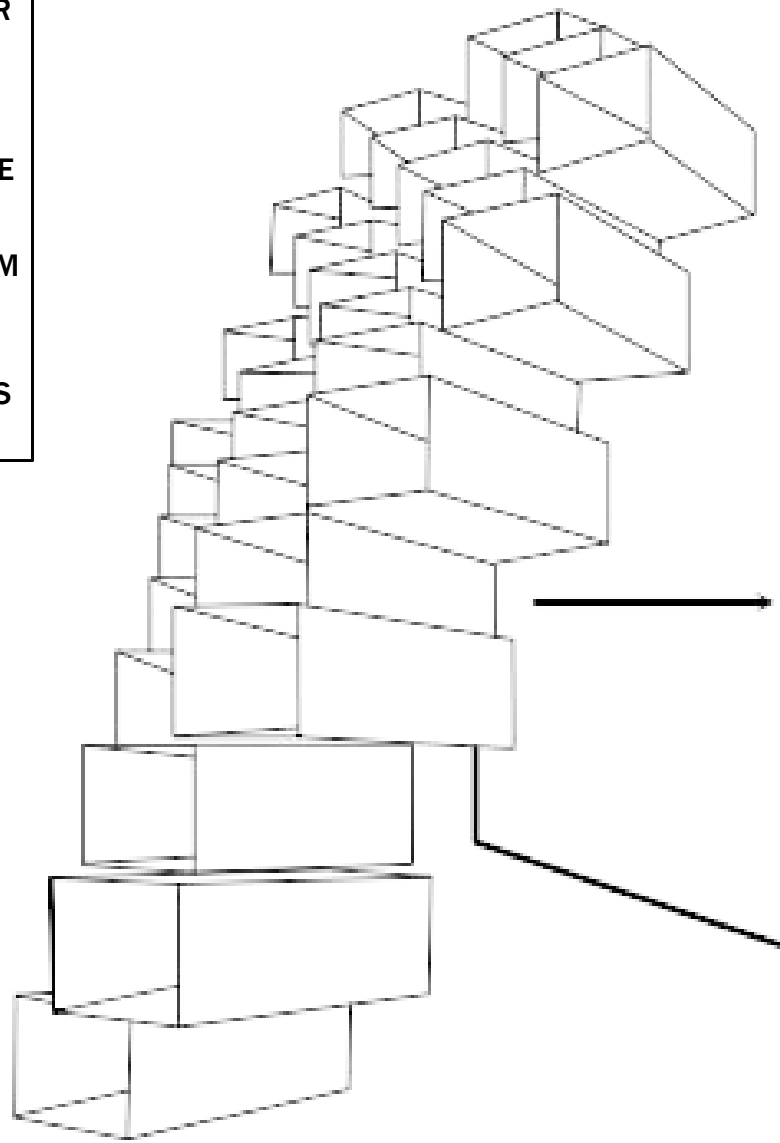

THIS STRUCTURE WILL BRIDGE THE GAP OVER A HIGH FOOT TRAFFIC AREA THAT SEPARATES THE MAJOR ‘GARDEN SPACES’ AROUND THE UNIVERSITY.

ANOTHER STRUCTURE THAT WILL BEST UTELISE THE MODULAR SYSTEM AND AID IN THE ACHIEVEMENT OF POSSUM POPULATION GROWTH IS A WALL FACADE. THIS ALLOWS THE POSSUMS AN ACCESS POINT TO CLIMB OFF THE GROUND WHERE THEY ARE AT HIGH RISK OF PREDATORS ALONG WITH PROVIDING TEMPORARY SHELTER AS THE MOVE THROUGH THE CAMPUS. I BELIEVE 'TEMPORARY' SHELTER IS THE BEST WAY TO DESCRIBE THIS MODULAR STRUCTURE AS IT IS UNREALISTIC TO BELIEVE POSSUMS WOULD IN THE LONG TERM FAVOUR THIS STRUCTURE OVER THEIR NATURAL HABITAT OF LARGE TREES, OFTEN GUM TREES. THIS STILL DOESN'T DIMINISH THE IMPACT OF THE TEMPORARY SHELTER FOR THE POSSUMS DURING TRANSPORT, SCAVENGING OR IN MOMENTS WHERE THEY UNDER THREAT.

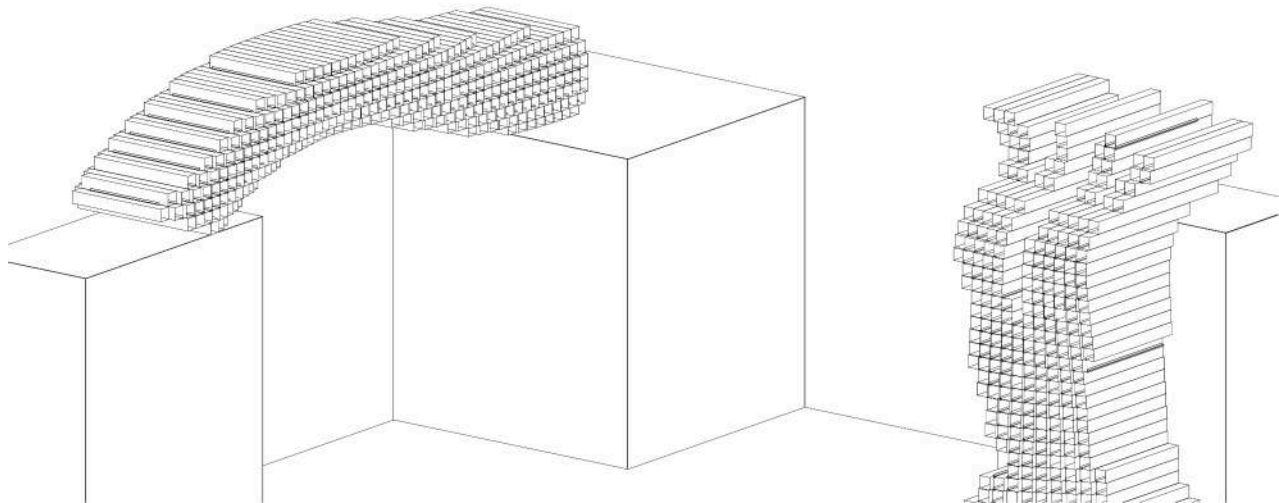

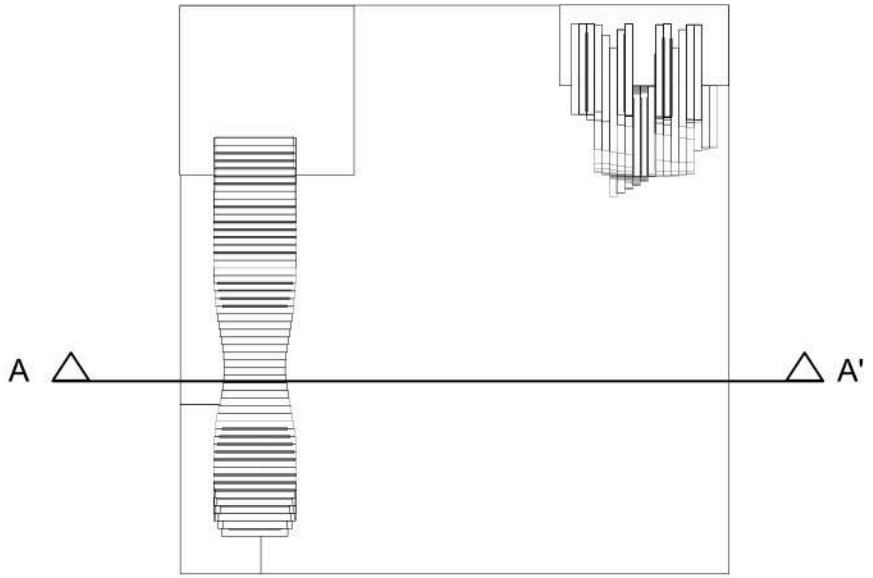

THE LOCATION FOR THE WALL FACADE WAS CHOSEN NOT ONLY FOR ITS PROXIMITY TO THE BRIDGING STRUCTURE, BUT ALSO TO PROVIDE ACCESS TO SHELTER IN AN OPEN SPACE.

FINAL DESIGN

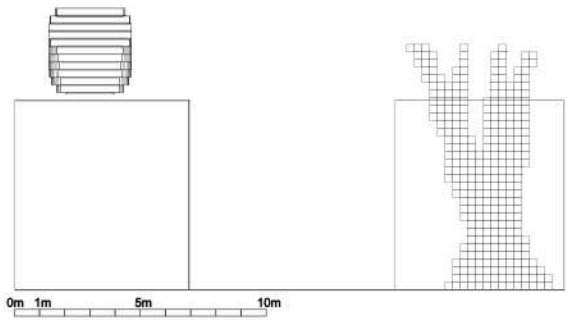

FOLLOWING ON FROM THE FURTHER DESIGNS I PRODUCED AND SOME DEEPER RESEARCH INTO THE NEEDS OF POSSUMS, I HAVE GENERATED THE FINAL DESIGNS FOR MY MODULAR SYSTEMS ON MY MINI SITE. WHILE BOTH STRUCTURES PROGRESS FROM MY EARLIER DESIGNS QUITE LINEARLY, I IMPLEMENTED A MORE CREATIVE ELEMENT WITH THE 'POSSUM HOTEL' (WALL FACADE) STRUCTURE. BASED ON PREVIOUS DISCUSSIONS SURROUNDING HOW POSSUMS WILL ALWAYS BE MORE INCLINED TO SHELTER IN THEIR PREFERRED TREES IN THE LONG TERM, I AIMED TO MIMIC THE SHAPING, HEIGHT AND LATER ON COLOUR OF A GUM TREE IN THAT STRUCTURE. REMOVING SOME BOXES TO CREATE A BRANCH LIKE STRUCTURE IS COMPLETED WITH THE PURPOSE OF EASING THE POSSUMS TRANSITION FROM THEIR GUM TREE HABITAT TO A NON NATURAL SHELTER.

THE SECOND STRUCTURE OR THE 'POSSUM BRIDGE' AIMS TO UTILISE THE POSSUM'S NATURAL CLIMBING SKILLS AND AID IN HAVING THOSE SKILLS UTILISED TO CROSS AN OPEN SPACE WITHOUT THE THREAT OF PREDATORS FROM BOTH ABOVE AND BELOW. THE SIZE OF THE BOXES ARE 150MMX150MM WHICH ALLOWS FOR INDIVIDUAL POSSUMS OR SMALL POSSUM FAMILIES TO FIT COMFORTABLY IN THE BOXES, HOWEVER THE SIZE IS TOO SMALL TO FIT LARGER PREDATORS. FOR THE SAME REASON OF PROTECTION AGAINST PREDATOR IS THE EXPLANATION FOR THE DEPTH OF THE MODULAR STRUCTURE. THE BOXES WHILE VARIED IN LENGTH ARE ALL LONG ENOUGH TO PROVIDE POSSUMS PROTECTION AGAINST THE OUTSTRETCH CLAWS OR TALONS OF THEIR PREDATORS.

IMAGINE

BRUSHTAIL POSSUM

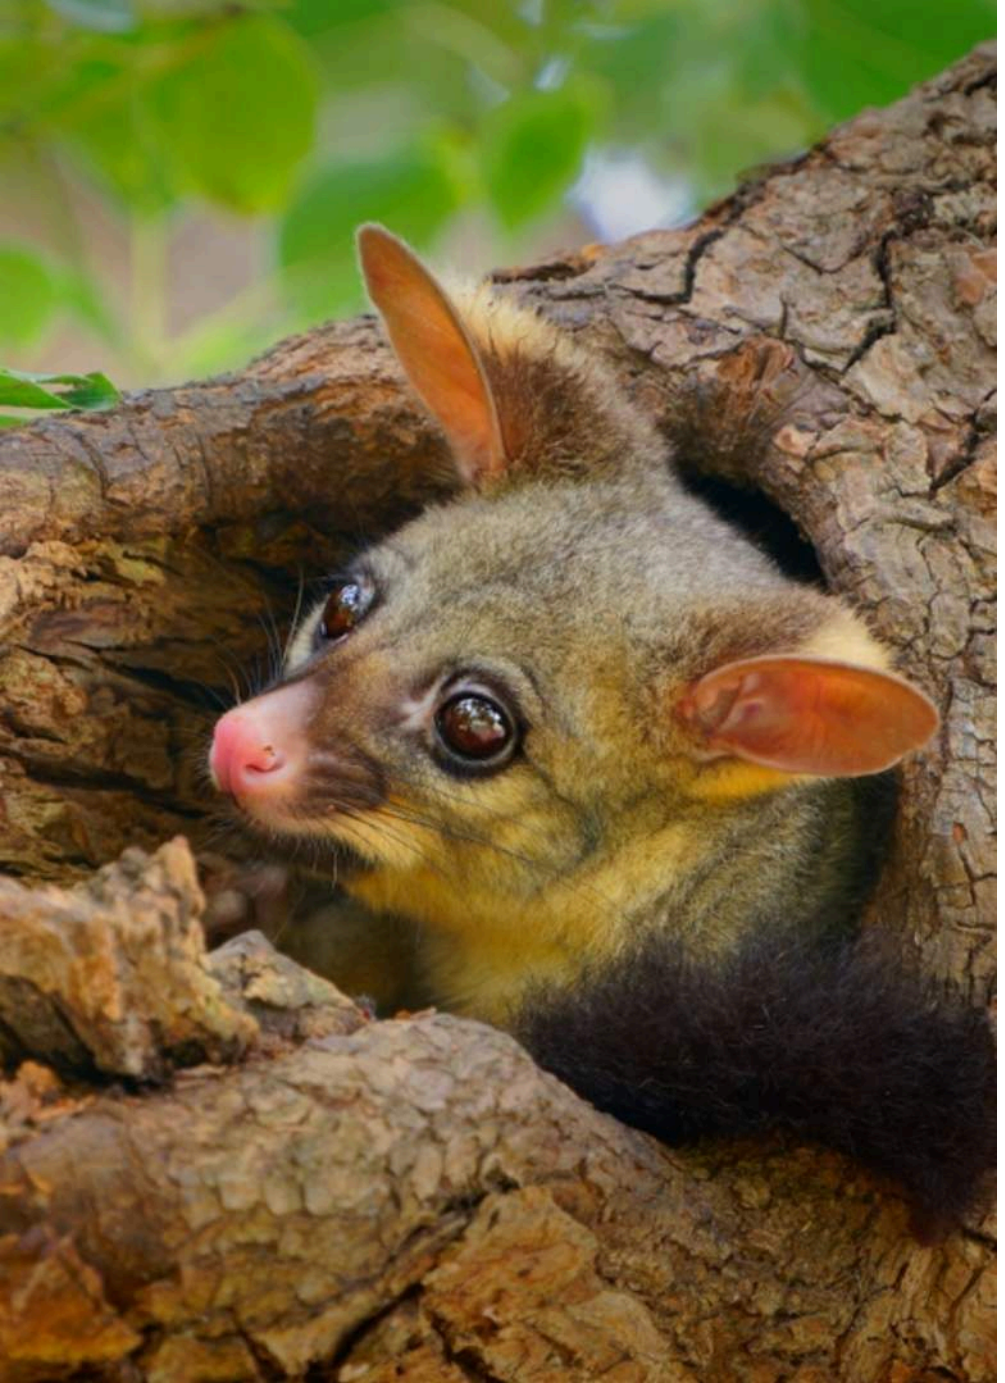

TRICHOSURUS VULPECULA

THE BRUSHTAIL POSSUM IS A NOCTURNAL SEMIARBOREAL MARSUPIAL THAT IS NATIVE TO AUSTRALIA. THEY ARE OMNIVOROUS, EATING SMALL MAMMALS BUT VERY RARELY. A KEY PART OF THEIR DIET THAT IS RELEVANT TO THEIR LOCATION ON CAMPUS ARE EUCALYPTUS LEAVES.

BRUSHTAIL POSSUMS ARE SUITABLE TO BE CITY DWELLERS AND ARE VERY ADAPTABLE TO BOTH NATURAL AND HUMAN MADE ENVIRONMENTS. THIS MAKES THEM AN EXCELLENT CANDIDATE FOR BEING A BENEFACTOR OF REWILDING PROFESSORS WALK. THEIR POPULATION DENSITY IN CERTAIN LOCATIONS IS VERY DEPENDANT ON INTRODUCED SPECIES OVERTAKING THEIR HABITATS AND PREDATORS HUNTING THEM WHEN THEY ARE UNPROTECTED.

TO GET A BETTER UNDERSTANDING OF THE PATTERNS OF BRUSHTAIL POSSUMS WE CAN LOOK ACROSS THE OCEAN TO NEW ZEALAND WHERE THEY ARE AN INTRODUCED SPECIES. THROUGH A COMPARISON OF HABITAT AND PREDATORS WE CAN MORE DEEPLY UNDERSTAND THEIR BEHAVIOUR. IN AUSTRALIA, POSSUMS ARE LESS DENSELY POPULATED THAN IN NEW ZEALAND WHICH CAN BE ATTRIBUTED TO THE SPREAD OF EUCALYPT FORESTS IN AUSTRALIA AND THE INCREASED NUMBER OF PREDATORS. IN NEW ZEALAND THE ONLY PREDATORS OF POSSUMS ARE HUMANS AND DOMENSTICATED PETS, WHILE IN AUSTRALIA THEY HAVE A MUCH LARGER RANGE OF PREDATORS. DRAWING FROM THIS COMPARISON WE CAN DETERMINE THAT A MORE DENSE POPULATION OF POSSUMS WOULD BE OPTEMIAL FOR THE SPECIES REWILDING.

THE KEY THINGS TO NOTE WITH POSSUM BEHAVIOUR IS THEIR HABITAT PREFERENCES. THEY OFTEN MAKE DENS IN NATURAL SPACES, BUT ARE NOT AGAINST MAKING SPACES IN HUMAN BUILT STRUCTURES. BRUSHTAIL POSSUMS IN NEW ZEALAND ARE MORE LIKELY TO USE DEN SITES THAN IN AUSTRALIA, WITH THE MODULAR STRUCTURE FOR REWILDING THE GOAL IS TO GENERATE AN ENVIRONMENT WHERE BRUSHTAIL POSSUMS IN AUSTRAILIA ACTS MORE CLOSELY TO BRUSHTAIL POSSUMS IN NEW ZEALAND WHERE THEY HAVE MUCH FEWER PREDATORS.

SIZE AND SEASON

THE AVERAGE BRUSHTAIL HEAD AND BODY LENGTH IS 35-55CM WHILE THEIR TAILS RANGE FROM 25 - 40CM LONG. THE MARSUPIALS WEIGH 1.2 - 4.5 KG. BRUSHTAIL POSSUMS CAN FIT THROUGH HOLES OF 12CM HOWEVER FOR THEM TO BURROW IN FAMILIES AND WITH MORE COMFORT THE IDEALLY BURROW IN HOLES OF 15 CM WIDTHS.

STUDIES COMPLETED BY WILDLIFE VICTORIA HAVE FOUND THAT THE TIME SPLIT OF BRUSHTAIL POSSUMS BEHAVIOUR IS APPROXIMATELY “16% SPENT FEEDING, 30% TRAVELLING, 44% SLEEPING OR SHELTERING AND 10% GROOMING” BASED ON THESE BEHAVIOUR PERCENTAGES THE MAJOR FOCUS POINTS FOR REINTRODUCING AND STRENGTHENING THE POPULATION OF BRUSHTAIL POSSUMS IS SHELTER FOR SLEEPING AND PROTECTION FROM PREDATORS WHILE TRAVELLING.

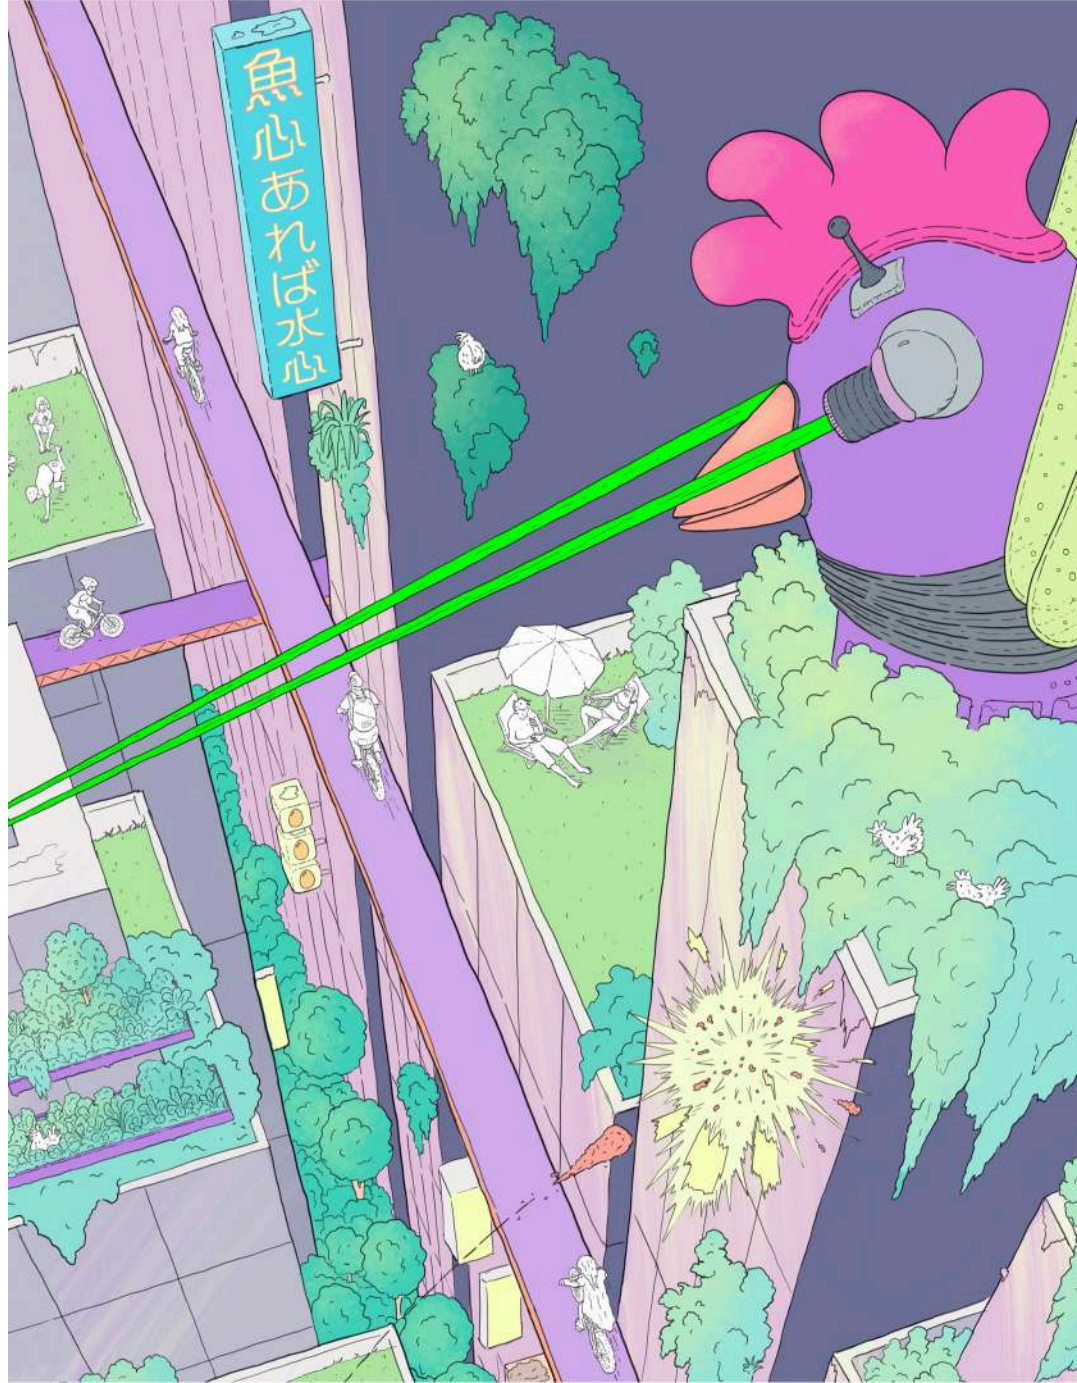

BREEDING SEASON FOR BRUSHTAIL POSSUMS PEAKS FROMS SEPTEMBER TO NOVEMEBER.

EXPERT PRACTISE INSPIRATION

FOR ONE OF THE EXPERT GRAPHIC APPROACHES THAT I HAVE CHOSEN FOR MY NARRATIVE SEQUENCE, I HAVE DECIDED TO REVISIT ULTRAWILD BY STEVE MUSHIN. HIS WORK WITH THIS BOOK IS NOT ONLY SIMILAR TO THE AMBITIOUS AND OUTLANDISH REWILDING IMAGERY THAT I'M AIMING TO ACHIEVE, I ALSO FIND HIS GRAPHIC DESIGN STYLE IS EYE CATCHING AND REPRESENTS HIS IDEAS IN A WHIMSICAL METHOD.

IN HIS DEPICTIONS HE UTILISES VIBRANT COLOURS, RULES OF THIRDS AND A CLEAR FOREGROUND, MIDDLE GROUND AND BACKGROUND TO AID IN THE PERSPECTIVE OF HIS SCENES BUT ALSO ALLOWS FOR SPECIFIC ELEMENTS TO EMPHASISED AND HIGHLIGHTED.

HIS WORK IS A KEY INSPIRATION AS WELL AS IT BALANCES DEVELOPABILITY WITH EXTREME IDEAS. THROUGH MY DISCIPLINE OF ENGINEERING THIS IS SOMETHING I CAN SEE BEING A REPEATED OBSTACLE. AS SUCH HIS APPROACH TO TAKE EXTREME IDEAS AND DIVE INTO THEM TO DEVELOP THEM WITH CONSTRUCTION, MATERIAL AND FEASIBILITY IN MIND IS SOMETHING I AIM TO EMPLOY.

EXPERT PRACTISE INSPIRATION

LOOKING INTO THE MORE TECHNICAL SIDE OF THE NARRATIVE SEQUENCE, I HAVE REVIEWED THE WORK OF ARCHITECTURE FIRM THREEFOLD ARCHITECTS. THE WAY THEY REPRESENT THE INTERNAL AND LIVEABLE ASPECTS OF THEIR DESIGNS IS AN ASPECT I WANT TO EMULATE IN MY SEQUENCE. EXPLORING HOW AGENTS INTERACT WITH THE MODULAR STRUCTURE IN A VIBRANT YET MODERATELY TECHNICAL LENS IS THE INTENSION FOR MY NARRATIVE SEQUENCE.

THREEFOLD ARCHITECTS HAVE TAKEN SECTIONED VIEWS OF THEIR BUILDING TO EXPLORE THE INTERNAL LIVEABILITY. TO EXPLORE THE PERSPECTIVE OF THE POSSUMS FOR MY NARRATIVE SEQUENCE I WILL BE USING THIS IN CONJUNCTION WITH THE AMBITIOUS AND VIBRANT DESIGNS OF STEVE MUSHIN TO ACHIEVE THE REPRESENTATION OF REWILDING I AM AIMING FOR.

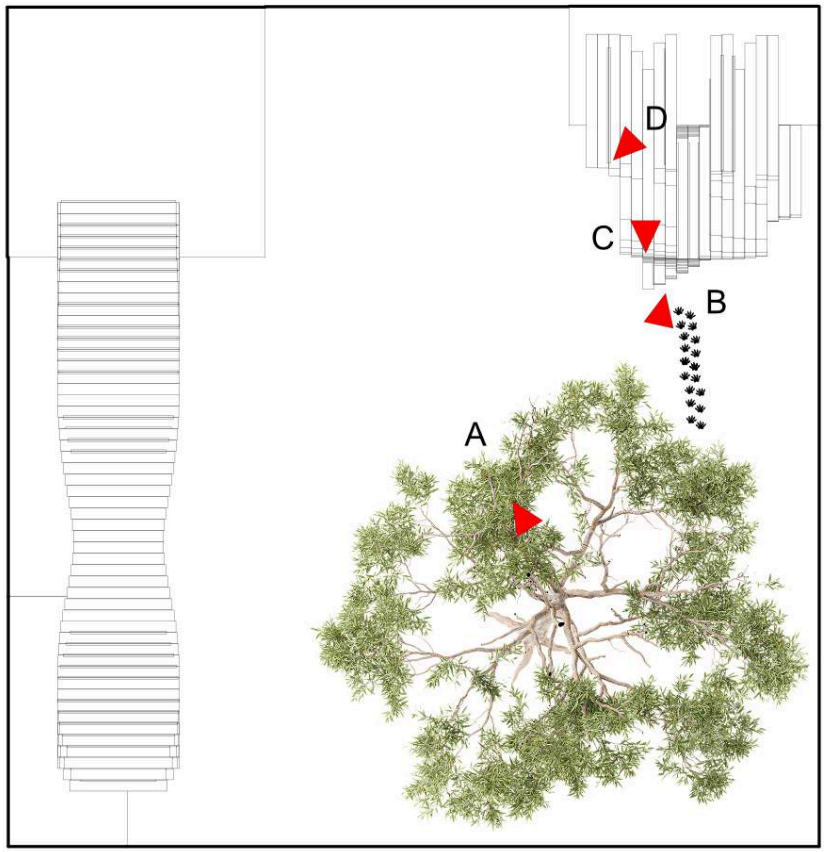

MAP OF NARRATIVE SEQUENCE

I CHOSE EACH POSSUM'S PERSPECTIVE OF MY NARRATIVE SEQUENCE FOR A SPECIFIC REASON, INTENDING TO DEMONSTRATE HOW MY AGENT INTERACTS WITH THE MODULAR STRUCTURE AND PRESENT A WHIMSICAL VIEW ON REWILDING PROFESSORS WALK. THE LOCATION OF SCENE A WAS SELECTED IN ORDER TO PRESENT AND ESTABLISH A WIDE VIEW OF THE MINI SITE, INSPIRED BY THE PERSPECTIVES OF STEVE MUSHIN I CHOSE THIS ANGLE TO HIGHLIGHT THE AMBITIOUS REWILDING AND SETUP HOW THE MODULAR POSSUM HOTEL AND BRIDGE FITS INTO THE SITE. THE ANGLE OF SCENE B WAS SELECTED IN ORDER TO INTEGRATE IN THREEFOLD ARCHITECT'S METHOD OF DISPLAYING 'LIVEABILITY'. THE CLOSE UP ADDS A BIT OF 'UNREALISTIC WHIMSY' TO COMMENT ON THE POSSUM'S INTERACTION WITH THE STRUCTURE.

THE PERSPECTIVE OF SCENE C WAS CHOSEN IN ORDER TO FURTHER EXPLORE THE POSSUM'S INTERACTION WITH THE STRUCTURE, IN PARTICULAR THE PURPOSE OF SHELTERING FROM PREDATORS. THIS VIEW PRESENTS A MORE REALISTIC INTERPRETATION OF THE POSSUMS' INTERACTION WITH THE STRUCTURE IN COMPARISON TO SCENE B, ADDITIONALLY IT AIDS IN THE VIEWER'S INTERPRETATION OF SCALE. THE ANGLE AND VIEW POINT OF SCENE D WAS SELECTED TO NOT ONLY FURTHER EXPLORE THE DETAIL OF THE POSSUM BRIDGE BUT ALSO TO ACHIEVE IT FROM THE PERSPECTIVE OF A POSSUM ON THE POSSUM HOTEL. THIS PROVIDES A CONJUNCTION OF THE TWO, GENERATING A COHESIVE VIEW OF THE ENTIRE MINI SITE.

A

VACANT
WELCOME
B

C

D

VACANT

SCENE A

THIS SCENE OF MY NARRATIVE SEQUENCE TOOK MAJOR INSPIRATION FROM STEVEN MUSHIN, NOT ONLY FOR ITS EXTREME TAKE ON REWILDING BUT ALSO FROM ITS TAKE ON PERSPECTIVE AND HAVING A STRONG FOREGROUND, MIDGROUND AND BACKGROUND. THE VIBRANCE OF THE COLOURS IS INTENDED TO DRAW FROM MUSHIN'S COLOUR CHOICES, AIMING TO PRESENT THE NATURAL PLANT LIFE IN A LIVELY AND STRICTLY POSITIVE MANNER.

DIVING FURTHER INTO THE DETAILS, THE PERSPECTIVE OF THE POSSUM IN THE GUM TREE IS DRAWING FROM NOT ONLY THE NATURAL HABITAT OF THE POSSUM'S BUT IS INTENDED TO COMMENT ON HOW MORE THAN JUST THE MODULAR STRUCTURES ARE REQUIRED TO SUPPORT THE REWILDING OF PROFESSORS WALK AND THE GROWTH IN POSSUM POPULATION. AN INFLUX OF NATIVE PLANT LIFE IS REQUIRED TO SUPPLY THE INFLATED ECOSYSTEM AS EXHIBITED PREVIOUSLY IN THE FOOD WEBS.

I TOOK INSPIRATION FROM MORE TECHNICAL ENGINEERING DRAWINGS TO BETTER EXHIBIT THE POSSUM BRIDGE THROUGH THE TRANSPARENT BUILDING. THIS ALLOWED ME TO DRAW FROM MY OWN DISCIPLINE IN A MORE CREATIVE MANNER WHILE STILL AIDING IN THE REPRESENTATION OF THE PERSPECTIVE. FOR ALL MY SCENES BUT IN PARTICULAR SCENE A, I EXPLORED THE ALREADY PRESENT NATIVE PLANT LIFE AT MY MINI SITE. SPECIFICALLY FOR THIS SCENE ARE THE CLIMBER PLANTS THAT LINE THE WALLS. THESE ARE ALREADY VERY PREVALENT THROUGHOUT PROFESSORS WALK BUT IN THE INTEREST OF EXTREME REWILDING I CHOSE TO ENHANCE THE RANGE AND VOLUME OF THE PLANTS IN MY SCENE.

ALSO DEPICTED FOR SCENE A IS A NIGHT TIME VARIANT OF THE POSSUM'S PERSPECTIVE. THIS WAS COMPLETED IN ORDER TO PRESENT THE FACT THAT POSSUMS ARE NOCTURNAL.

SCENE B

SCENE B INTERPRETS THE WORK OF THREEFOLD ARCHITECTS IN A MORE STORYBOOK AND WHIMSICAL MANNER. WHILE THREEFOLD ARCHITECTS UTILISED THIS PERSPECTIVE TO DEMONSTRATE ACCURATE LIVEABILITY OF THEIR BUILDINGS, I HAVE UTILISED IT TO COMMENT ON THE PURPOSE OF THE MODULAR STRUCTURE TO HOUSE THE POSSUMS IN A COMICAL WAY.

THE NARRATIVE OF THIS SCENE IS THAT THE POSSUM HAS LEFT ITS NATURAL HABITAT OF THE GUM TREE, EXPLORING THE 'POSSUM HOTEL'. THE CHOICES FOR THE CONTENT OF EACH 'ROOM' WERE PURPOSEFUL IN DEMONSTRATING THAT THE MODULAR ROOMS HAVE MORE PURPOSE THAN SHELTER, AND THAT WE THE DESIGNERS, HAVE NO CONTROL OVER HOW THE AGENTS WILL END UP INTERACTING WITH THE STRUCTURE. WE CAN GUIDE THEM THROUGH CAREFUL DESIGN CHOICES, HOWEVER THEIR USE OF THE MODULAR SYSTEM IS ENTIRELY UP TO HOW THEY CAN UTILISE IT FOR SURVIVAL.

THIS SCENE ALSO HAS THE NIGHT TIME VARIANT, INTERPRETING THE POSSUM'S NOCTURAL LIFESTYLE. THIS GAVE ME AN OPPORTUNITY TO EXPLORE THE CONCEPT OF LIGHTING WITHIN THESE STRUCTURES. EVEN THOUGH INTERNAL LIGHTING IS REPRESENTED HERE FOR THE PURPOSE OF AESTHETICS, IN PRACTISE LIGHTING THE STRUCTURE WOULD LIMIT THE POSSUM'S ABILITY TO HIDE FROM PREDATORS.

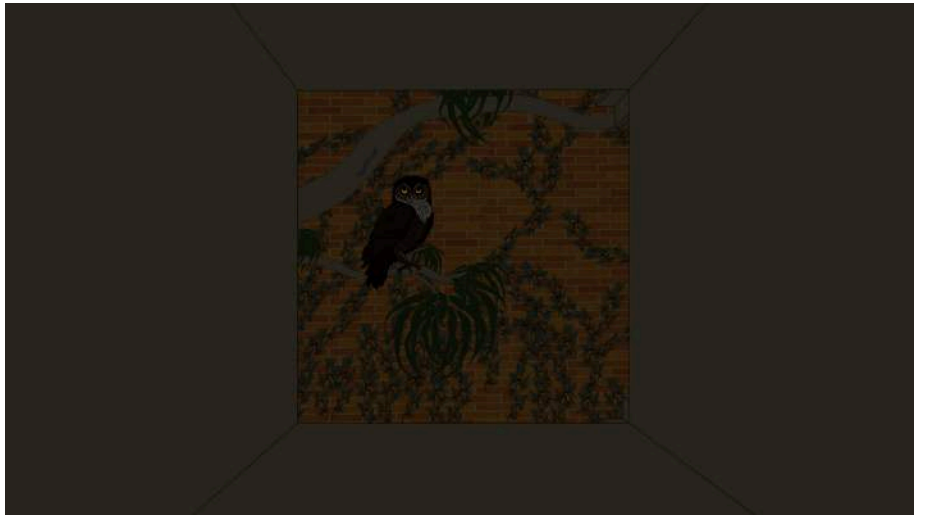

SCENE C

SCENE C ALLOWED ME TO EXPLORE THE PURPOSE OF THE STRUCTURE TO PROTECT POSSUMS FROM PREDATORS WHILE COMMENTING ON THE OVERALL AFFECT OF REWILDING. AS DEMONSTRATED IN THE SPECULATIVE FOOD WEB, WITH AN INFLUX OF POSSUMS WE WOULD IN TURN PRODUCE AN INFLUX OF ITS PREDATORS TOO. THIS IS NOT ONLY FROM THE INCREASE POPULATION OF POSSUMS BUT ALSO THROUGH THE REWILDING THAT HAS THE INTENT TO SUPPORT THE POSSUMS BUT WILL CONJUNCTIONALLY SUPPORT THEIR PREDATORS. IN THIS SCENE I HAVE DEPICTED A POWERFUL OWL, WHICH IS ONE OF THE MAJOR PREDATORS OF THE BRUSHTAIL POSSUM, PERCHED ON THE GUM TREE THAT I INTRODUCED TO THE SITE WITH THE INTENT OF COMPLEMENTING THE POSSUM'S NEW MODULAR HABITATS WITH THEIR NATURAL ONES. BY HAVING THE OWL PERCHED ON THE TREE I HOPE TO COMMENT ON THE COMPLEXITY OF REWILDING AND HOW IT IS A SYSTEM THAT PROMOTES WIDESPREAD ECOSYSTEM CHANGES.

THIS SCENE ALSO PROVIDES A GOOD COMPARISON BETWEEN THE COLOUR OF THE MODULAR STRUCTURES AND THE POSSUM'S NATURAL HABITAT. AS PREVIOUSLY MENTIONED BOTH MODULAR STRUCTURES WERE HIGHLY INSPIRED BY THE SHAPE OF GUM TREE BRANCHES AND THIS SCENE AIDS IS DEMONSTRATING THE SIMILAR COLOURS. THIS IS COMPLETED WITH THE INTENT OF CONVEYING THE DESIGN CHOICES THAT WERE CARRIED OUT WITH THE INTENTION OF MAKING THE POSSUM'S TRANSITION FROM NATURAL TO INTRODUCED SHELTER SMOOTHER.

SCENE D

SCENE D IS TAKEN FROM THE PERSPECTIVE OF A POSSUM ON TOP OF THE ‘POSSUM HOTEL’ LOOKING OVER AT THE ‘POSSUM BRIDGE’. THIS PERSPECTIVE GAVE ME AN EXCELLENT OPPORTUNITY TO NOT ONLY EXPLORE THE BRIDGE IN MORE DETAIL, BUT ALSO TO PRESENT A VIEW WITH POSSUMS UTILISING THE STRUCTURE.

THE FIRST THING TO COMMENT ON WITH THE DEVELOPABILITY OF THIS STRUCTURE IS THE SUPPORTS HOLDING IT UP. MY INTENSION FOR THIS IS TO HAVE ANCHORS HOLDING THE STRUCTURE TO THE BUILDING BUT HAVING THE WEIGHT SUPPORTED BY WIRES THAT ARE ATTACHED FURTHER UP THE BUILDING. THIS STYLE OF SUPPORTS IS INTENDED TO BE THE AESTHETICALLY VIABLE AND ALSO TO BE THE LEAST COMPLEX IN TERMS OF ADDING WEIGHT TO PRE-ESTABLISHED BUILDINGS.

THE PURPOSE OF THE POSSUMS IN THIS VIEW IS TO PRESENT THE UTILISATION OF THE STRUCTURE. AS DEPICTED SOME POSSUMS ARE WALKING OVER THE TOP OF THE STRUCTURE USING IT AS A BRIDGE BETWEEN BUILDINGS, WHILE SOME ARE INSIDE THE MODULAR BOXES USING IT AS A SHELTER.

OVERALL THIS SCENE NOT ONLY AIDS IN THE REPRESENTATION OF THE POSSUM’S UTILISATION OF THE STRUCTURE, ALLOWS FOR COMMENTS ON THE SUPPORT AND DEVELOPABILITY OF THE STRUCTURE BUT ALSO COMPLIMENTS THE PERSPECTIVE IN SCENE A CREATING A WELL ROUNDED NARRATIVE SEQUENCE.

METHOD OF NARRATIVE

FOR MY NARRATIVE SEQUENCE I COMPLETED ALL THE DRAWINGS ON AFFINITY DESIGNER, UTILISING SOME MORE SCRAPBOOKING TECHNIQUES BY USING OTHER'S IMAGES (REFERENCED) TO ACHIEVE A MORE COMPLEX PERSPECTIVE. I ALSO UTILISED AFFINITY PHOTO'S PERSPECTIVE WARP TOOL TO MANIPULATE MY DRAWINGS AND IMAGES TO ALIGN WITH THE PERSPECTIVES I CHOSE FOR EACH SCENE. EVEN THOUGH ONE OF MY CHOSEN EXPERT PRACTISE INSPIRATIONS OF STEVE MUSHINS 'ULTRA WILD' WORK WAS COMPLETED THROUGH HAND DRAWING I FOUND THAT THE BEST WAY TO REPRESENT MY CONCEPT WAS THROUGH DIGITAL DRAWING WHERE I COULD PLAY WITH LIGHTING IN A MORE SIMPLISTIC MANNER, I COULD PRODUCE THIS EXTREME REWILDING EFFECT THROUGH REPEATEDLY COPYING MY DRAWINGS ALONG WITH THE EASE OF CHANGING ANGLES OF DRAWINGS TO ALIGN WITH THE PERSPECTIVE.

TO INCLUDE A BIT OF REFLECTION, I WANT TO MENTION THE GROWTH IN MY DIGITAL DRAWING THROUGHOUT THIS COURSE. THIS WAS SOMETHING I HAD NOT EXPLORED PRIOR TO STARTING FODR AND PART OF WHY I CHOSE THIS METHOD OF REPRESENTATION FOR THE FINAL ASSIGNMENT WAS TO DEMONSTRATE THE SKILLS I HAVE LEARNED AND TO PUSH MY NEWLY ACQUIRED SKILLS.
